The claimed invention

The claimed invention relates to a pressure-fluid-operated percussion device comprising a frame allowing a tool to be arranged therein movably in its longitudinal direction, means for feeding pressure liquid to the percussion device and for returning pressure liquid to a pressure liquid tank, and means for producing a stress pulse in the tool by utilizing pressure of the pressure liquid. The invention includes a pressure liquid source for maintaining pressure in the working pressure chamber. and means for intermittently feeding pressure liquid to the percussion device such that the pressure liquid pushes a transmission piston into a predetermined backward position such that pressure liquid is discharged from the working pressure chamber, and for alternately allowing pressure liquid to be discharged rapidly from the percussion device so that the pressure of the pressure liquid in the working pressure chamber and pressure liquid flowing thereto from the pressure liquid source pushes the transmission piston towards the tool, thus generating a stress pulse in the

Supplemental Box

In case the space in any of the preceding boxes is not sufficient. Continuation of: Box $\,V\,$

The documents cited in the International Search Report represent the prior art. The claimed invention stated in claims 1-5 is not considered to be anticipated by these documents. None of the documents or any relevant combination of them reveals a pressure-fluid-operated percussion device as described by these claims.

According to the arguments stated above, the invention claimed in claims 1-5 is novel, considered to involve an inventive step and has industrial applicability.
